Naveen Jindal School of Management

Master of Science in Management Science

36 semester credit hours minimum

Faculty

Associate Professors: Nina Baranchuk, Norris Bruce, Huseyin Cavusoglu, Jianqing Chen, Zhonglan Dai, Rebecca Files, Xianjun Geng, J. Richard Harrison, Dorothée Honhon, Kyle Hyndman, Surya N. Janakiraman, Robert L. Kieschnick Jr., Lívia Markóczy, Syam Menon, Toyah Miller, Alp Muharremoglu, Ramachandran (Ram) Natarajan, Valery Polkovnichenko, Orlando C. Richard, Young U. Ryu, Gil Sadka, Jane Salk, Harpreet Singh, David J. Springate, Upender Subramanian, Kelsey D. Wei, Jun Xia, Ying Xie, Yexiao Xu, Alejandro Zentner, Yuan Zhang, Feng Zhao, Yibin Zhou

Assistant Professors: Mehmet Ayvaci, Emily Choi, Bernhard Ganglmair, Dorothée Honhon, Elisabeth Honka, Kyle Hyndman, Atanu Lahiri, Sheen Levine, Bin Li, Jun Li, Meng Li, Ningzhong Li, Xiaolin Li, Naim Bugra Ozel, Arzu Ozoguz, Anyan Qi, Alejandro Rivera Mesias, Alessio Saretto, Serdar Simsek, Gonca P. Soysal, Shaojie Tang, Christian Von-Drathen, Yu Wang, Malcolm Wardlaw, Han (Victor) Xia, Steven Xiao, Shengqi Ye, Nir Yehuda, Yuanping Ying, Jiying Zhang, Zhe (James) Zhang, Xiaofei Zhao

Clinical Associate Professors: Sonia Leach, Carolyn Reichert, Avanti P. Sethi, Kelly Slaughter, James Szot, Mark Thouin, John McClain Watson

Clinical Assistant Professors: Shawn Alborz, Athena Alimirzaei, Moran Blueshstein, Judd Bradbury, John Gamino, Ayfer Gurun, Maria Hasenhuttl, Julie Haworth, Jeffery (Jeff) Hicks, Kristen Lawson,

Degree Requirements

The Master of Science in Management Science (MS MAS) degree is a flexible degree program that allows students to design a program of study that fits their specific needs. Students complete a 36 semester credit hours program, beyond prerequisite courses, consisting of 10 semester credit hours of core courses and 26 semester credit hours of graduate level electives. Students must maintain a 3.0 grade-point average (GPA) in both core courses and in aggregate courses to qualify for the MS degree.

Students should be aware that separate Master of Science programs, with varying core and elective requirements exist in the following areas:

- Accounting
- Business Analytics
- Energy Management
- Finance and Managerial Economics
- Healthcare Management
- Information Technology and Management
- Innovation and Entrepreneurship
- International Management Studies
- Marketing
- Supply Chain Management
- Systems Engineering and Management

For the MS MAS degree program, students choose their own course of study, pulling courses from the Jindal School of Management graduate catalog.

NOTE: The Executive Education Area of the Jindal School of Management offers three additional and separate MS MAS programs, which retain the same set of core courses but have their own set of
specific topical electives. These include (1) the MS MAS with an emphasis in project management, (2) the Executive Healthcare MS MAS and (3) the MS MAS with an emphasis in organizational behavior and coaching. These programs are described in the Executive Education section under the Jindal School of Management graduate programs in the graduate catalog. All three programs are supported entirely by participant fees, and special admissions requirements apply.

Course Requirements

Core Courses: 10 semester credit hours

Each candidate must satisfactorily complete the following 10 semester credit hours core courses:

- **ACCT 6201** Introduction to Financial Accounting
- **MECO 6303** Business Economics
- **MIS 6204** Information Technology for Management
- **OPRE 6301** Quantitative Introduction to Risk and Uncertainty in Business

Elective Courses: 26 semester credit hours

A student's course of study beyond the core can be determined in consultation with faculty members, area coordinators or the advising office. Student may continue to generalize in management courses or choose to concentrate in a given subject that has historically been offered as a defined specialty in the master's programs. A concentration is an informal collection of electives that address a student's educational goals and may be aligned with functional area specialties, or it may cut across functional areas. Each concentration has a minimum of 15 semester credit hours in a given area such as:

**Accounting:** In today's global and technology-driven environment, managers need skills to effectively analyze accounting information and make value-enhancing decisions. Students may select accounting courses to concentrate in financial analysis, consulting, corporate governance and tax management. This concentration can be further refined to the areas of assurance services, taxation and internal audit.

**Business Analytics:** A concentration in business analytics covers statistics and econometrics, predictive modeling, decision and optimization (prescriptive) modeling, and data management. Students are prepared for a position within marketing analytics, decision and operations analytics, financial analytics, healthcare analytics and IT analytics.

**Energy Management:** The energy management concentration will provide students with skills critical to managerial decision making within energy companies, focusing on supply chain, operations, finance, and risk management.

**Finance:** Students can prepare for careers in corporate finance, investment management, or the management of financial institutions. Courses in this area emphasize creative solutions to business
financing problems, the development of value maximizing investment and financing strategies, and
the analysis and management of fixed income and equity investments. Students may choose to
concentrate in either corporate financial planning or the analysis of financial securities and
investment portfolios.

Healthcare Management: The primary goal of this concentration is to prepare students for
leadership positions in healthcare organizations. The healthcare concentration is cross-functional
and industry focused. Courses include cases, projects and assignments that are centered on
applying management skills to healthcare issues and organizations. Classes are taught by faculty and
healthcare executives who bring special expertise and experience to the program.

Information Technology Management: Information technology is integral to all business operations
and permeates all aspects of modern business and our courses will enable students to fully utilize
information technology to solve business problems and gain strategic advantage. Advanced courses
provide skills necessary for the "supply" side of information technology for IT consulting, software
management and e-business.

Innovation and Entrepreneurship: The concentration in innovation and entrepreneurship prepares
students for successful business careers in entrepreneurial new ventures, entrepreneurial finance
(venture capital/private equity), or innovation-related roles in mature organizations (product
planning, product marketing, product development, more). The concentration allows students to
pursue electives in either the new venture focus area or the innovation within the corporation focus
area.

Internal Audit: Today's job market for individuals in internal audit and risk management is
exceptional. A concentration in this area covers internal audit from a broad perspective and
addresses review of business processes, technology, governance, ethics, risk assessment and
auditing standards, which allows individual to work in any industry or discipline.

International Management: In today's global economy, there is a need to develop skills in various
international business environments. Students can take a multidisciplinary approach to study
international management, with courses in finance, marketing, strategic management, and legal and
cross-cultural management. These integrate concepts and theories with international policies and
business practices and prepare students to succeed in developing successful international ventures.

Leadership in Organizations: The leadership concentration prepares students for management
positions through the study of the psychological, sociological and organizational behavior disciplines.
The program provides a foundation of leadership theory, building and problem solving in
interpersonal work relationships, group dynamics, organizational decision-making and change and
ethics.

Marketing: Students learn to understand customers' needs and purchase behaviors, how to satisfy
those needs, and how to make a profit in competitive industries and markets. Topics include
developing an effective marketing strategy, developing new products and managing different
brands, and product categories. Students can also acquire expertise in pricing, advertising and
promotions, market research, and retailing strategies.
Real Estate: The real estate concentration will provide students with both a practical and educational basis to become skilled decision-makers within the industry. This concentration includes courses in real estate finance and capital markets, covering real estate loans, syndication, securitization, regulation, investment and analysis, combining lectures and case studies to explore the sources of real estate value, project feasibility, strategies for financing, and portfolio management while covering market analysis, government approvals, financing and risk assessment.

Strategic Management: This concentration focuses on corporate level strategic management, including implementation of strategic designs, top management team leadership, the strategic implications of the social, governmental, technological, and international environments, organization structuring, and strategic alliances. Students will learn how to integrate accounting, finance, economics and organization theory to create sustainable competitive advantage.

Supply Chain Management: Students specializing in supply chain management gain an analytical understanding of how to leverage profits by continuously improving business processes. Effective integration of customers, suppliers, factories and stores through the coordination of various functional areas (marketing, finance, procurement) is an important theme. The area emphasizes using incentives, contracts and information technologies to foster efficiency and success.

Systems Engineering and Management: The concentration is designed to meet the need for formalized education in design, engineering and management of complex systems involving a large number of interconnected components. It will develop a broad range of engineering and managerial skills that trains students to be managers of large projects that require expertise in both technical and managerial disciplines.
