Geospatial Information Sciences (BS)

Geospatial Information Science (or GIScience) is the study of relationships between phenomena in space and time. In recent years, powerful new technologies and techniques have emerged that greatly improve our ability to acquire, archive, analyze, and communicate information regarding people, places, and other things on or near the Earth's surface. These same technologies and techniques allow us to combine this information into multi-tiered databases describing the physical, social, and other aspects of all or portions of the Earth. Such databases can then be analyzed in novel ways that take the data's explicit spatial (or locational) nature into account. The insights produced by analyzing these types of databases are revolutionizing many fields of science, government, and business. Currently, commonplace consumer products such as web-based mapping systems and GPS units that incorporate locational information are directly impacting the everyday lives of ordinary individuals.

Graduates of the Bachelors of Science in Geospatial Information Science program will understand the logical, mathematical, and technological foundations for compiling and analyzing spatial data. They will be skilled in solving geospatial problems, enabling them to move into professional roles handling the geospatial needs of typical corporate, government, and nonprofit organizations. The graduates will not only be skilled in the use of common GIScience software systems, but also will understand the underlying principles upon which software systems are based. This will allow them to transfer their knowledge from one software system to another, to expand the capabilities of these systems, and most importantly, to view geospatial problems as issues that can be solved by applying basic theories, techniques and methodologies.

Mission and Objectives

The mission of the Bachelor of Science in Geospatial Information Sciences program is to provide students with a rigorous understanding of the fundamental theories and concepts underlying GIScience, as well as to provide them with extensive hands-on experience with contemporary GIScience hardware and software. The goal of the program is to give students a firm grasp of the theories, ideas, and techniques that underlay software and hardware systems for the compilation and analysis of spatially referenced data, and thus provide them with a foundation of knowledge and skill that transcends any individual piece of software or hardware. Graduates of this program will be able to successfully compete for professional positions within GIScience and related fields, and be admitted into the best graduate schools globally.

Students within the program will:

- Demonstrate their understanding of the underlying theories, ideas, concepts and techniques of GIScience.
- Master contemporary computer hardware and software systems commonly employed in GIScience.
- Demonstrate problem solving skills that employ their understanding of theories, ideas and concepts as well as their mastery of GIScience software and hardware.
Bachelor of Science in Geospatial Information Sciences

Degree Requirements (120 semester credit hours)

I. Core Curriculum Requirements: 42 semester credit hours

Communication: 6 semester credit hours

COMM 1311 Survey of Oral and Technology-based Communication
RHET 1302 Rhetoric

Mathematics: 3 semester credit hours

MATH 1325 Applied Calculus I

Life and Physical Sciences: 6 semester credit hours

Two of the following:

GEOS 1303 Physical Geology
ENVR 2302 or GEOG 2302 or GEOS 2302 The Global Environment
NATS 1311 From the Cosmos to Earth
NATS 2333 Energy, Water, and the Environment
PHYS 1301 College Physics I

Language, Philosophy and Culture: 3 semester credit hours

One of the following:

AMS 2341 American Studies for the Twenty-First Century
HUMA 1301 Exploration of the Humanities
LIT 2331 Masterpieces of World Literature
PHIL 1301 Introduction to Philosophy

Creative Arts: 3 semester credit hours

One of the following:

AHST 1303 Survey of Western Art History: Ancient to Medieval
AHST 1304 Survey of Western Art History: Renaissance to Modern
AHST 2331 Understanding Art
ARTS 1301 Explorations of the Arts

American History: 6 semester credit hours

Two of the following:
HIST 1301  U.S. History Survey to Civil War
HIST 1302  U.S. Survey from Civil War
HIST 2301  History of Texas

Government / Political Science: 6 semester credit hours
GOVT 2305  American National Government
GOVT 2306  State and Local Government

Social and Behavioral Sciences: 3 semester credit hours
One of the following:
CRIM 1301  Introduction to Criminal Justice
CRIM 1307  Introduction to Crime and Criminology
ECON 2301  Principles of Macroeconomics
ECON 2302  Principles of Microeconomics
GEOG 2303  People and Place: An Introduction to World Geographic Regions
SOC 1301  Introduction to Sociology

Component Area Option: 6 semester credit hours
EPPS 2301  Research Design in the Social and Policy Sciences
And one of the following:
EPPS 2302  Methods of Quantitative Analysis in the Social and Policy Sciences
EPPS 2303  Descriptive and Inferential Statistics for the Social and Policy Sciences

II. Major Requirements: 42 hours

Major Preparatory Courses: 9 semester credit hours
Three of the following:
ENVR 2302  or GEOG 2302  or GEOS 2302  The Global Environment
GEOG 2303  People and Place: An Introduction to World Geographic Regions
GEOG 3370  The Global Economy
GEOG 3377  or PA 3377  Urban Planning and Policy
MATH 1326  Applied Calculus II

Major Core Courses: 18 semester credit hours
GEOG 3304  or GISC 3304  or GEOS 3304  Introduction to Geospatial Information Sciences
GEOG 4380  Spatial Concepts and Organization  
GISC 2305 or GEOS 2305  Introduction to Spatial Thinking  
GISC 2302  Geodesy and Geospatial Analysis  
GISC 4325 or GEOS 4325  Introduction to Remote Sensing  
GISC 4382  Applied Geographic Information Systems  

Concentrations: 15 semester credit hours in ONE of the following concentration areas  

Geography  
GEOG 3331  Urban Growth and Structure  
GEOG 3357  Spatial Dimensions of Health and Disease  
GEOG 3359  Human Migration and Mobility  
GEOG 3372  Population and Development  
GEOG 3382  Russia: Yesterday, Today and Tomorrow  

GeoComputation and GeoVisualization  
MIS 3300  Introduction to Management Information Systems  
GISC 4317  GeoComputation  
GISC 4326  Cartography and GeoVisualization  
GISC 4384  Health and Environmental GIS: A Global Perspective  
GISC 4385  Advanced Applications in GIS  

III. Elective Requirements: 36 semester credit hours  
Prescribed Electives: 15 semester credit hours  
All students are required to take at least fifteen semester credit hours of prescribed upper-division elective courses.  

Free Electives: 21 semester credit hours  
This requirement may be satisfied with lower- and upper-division courses from any field of study. Students must complete at least 51 semester credit hours of upper-division courses to qualify for graduation.  

1. Incoming freshmen must complete and pass UNIV 1010 Freshman Seminar and the corresponding school-related freshman seminar course. Students, including transfer students, who complete their core curriculum at UT Dallas must take UNIV 2020.  
2. Curriculum Requirements can be fulfilled by other approved courses from institutions of higher education. The courses listed are recommended as the most efficient way to satisfy both Core Curriculum and Major Requirements at UT Dallas.
3. A Major requirement that also fulfills a Core Curriculum requirement. Semester credit hours are counted in Core Curriculum.

4. Alternative courses, as approved by the program head, may be used to satisfy this requirement.
