ECON 3305 - Economic Demography

ECON 3305 Economic Demography (3 semester credit hours) A general introduction to economic demography, addressing the following kinds of questions: What are the economic consequences of immigration to the U.S.? Will industrial nations be able to afford the health and pension costs of aging populations? How has the size of the baby boom affected its economic well-being? Why has fertility been high in Third World countries? In industrial countries, why is marriage postponed, divorce high, fertility so low, and extramarital fertility rising? What are the economic and environmental consequences of rapid population growth? Prerequisite: ECON 3310. (3-0) R
