ECON 4346 - Technology, Economy, and Society

ECON 4346 Technology, Economy, and Society (3 semester credit hours) This course explores the ways technology and society shape one another in an economic context. Drawing on theoretical and research contributions from several social sciences, the course devotes primary attention to the economic impacts of so-called information and communication technologies (ICT) on employment and earnings, job creation and destruction, new firm formation and failure, as well as profit and productivity.
